

CCC ONE Estimating Total Repair Platform (Repair Facilities) Optional OEM Terminology

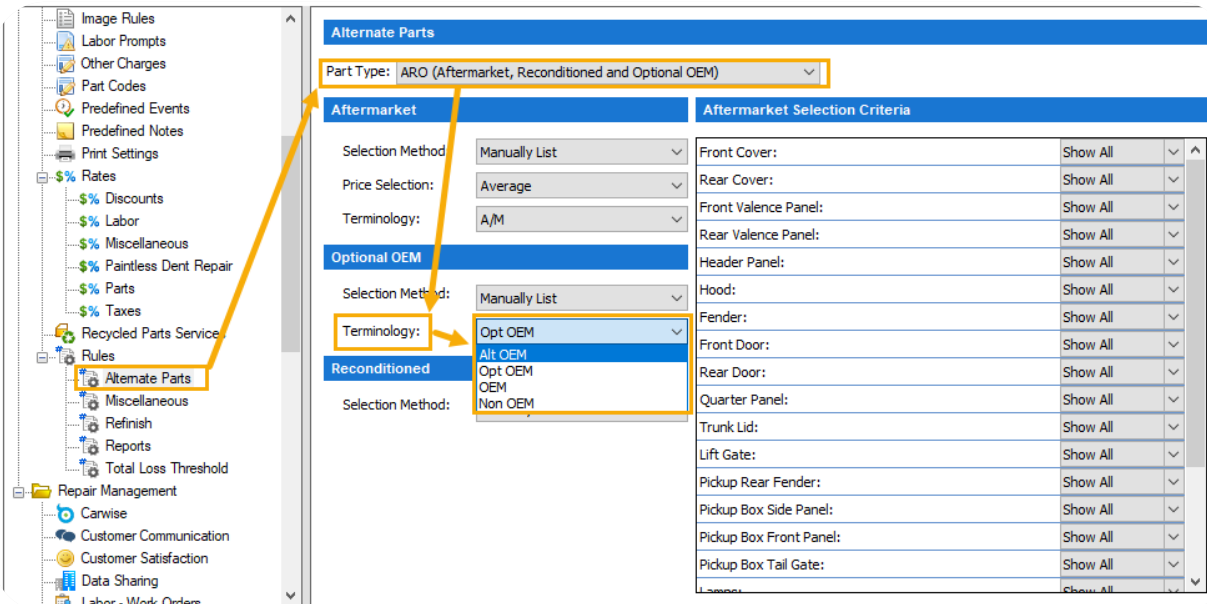

Introduction

Setting Up Alternate, Reconditioned, and Optional OEM Parts Usage

This feature allows you to set up the defaults for the program to use when processing Alternate parts (e.g., Aftermarket, Optional OEM, and Reconditioned). You may not have access to all of the fields depending on your security level. Options include part selection methods, price selection, and aftermarket selection criteria. If you accessed this screen through the work file, and not through the profile, you can view the data, but you cannot change it.

The Optional OEM section determines the terminology by which Optional OEM parts will be identified on the estimate and reports. The program defaults this field to **Opt OEM**. Prior to the 6.4 release, the valid values were **Opt OEM** and **Alt OEM**. The terms **OEM**, and **Non-OEM** were added in the 6.4 release and higher.

Edit the claim office or repair facility profile, click on the **Alternate Parts** link under Estimating > Rules. From there, select the **ARO (Aftermarket, Reconditioned and Optional OEM)** option in the **Part Type** drop list, then click on the **Terminology** drop list and select the terminology in the list.

The screenshot displays the 'Alternate Parts' configuration window. On the left is a navigation tree with 'Rules' > 'Alternate Parts' selected. The main window has a 'Part Type' dropdown set to 'ARO (Aftermarket, Reconditioned and Optional OEM)'. Below this are three sections: 'Aftermarket', 'Optional OEM', and 'Reconditioned'. The 'Optional OEM' section has 'Terminology' set to 'Opt OEM'. The 'Aftermarket Selection Criteria' table is as follows:

Part	Selection
Front Cover:	Show All
Rear Cover:	Show All
Front Valence Panel:	Show All
Rear Valence Panel:	Show All
Header Panel:	Show All
Hood:	Show All
